# **CLICKFIT**

ClickFit conforms to UL 2703 and UL 3741 and is one of the fastest installing rail-based systems in the industry. Thanks to its Click-In Rail assembly, the rails can be connected to any of EcoFasten's composition shingle, tile, and metal roof mounts in seconds. The ClickFit system is made of robust materials, to ensure longevity. ClickFit has been tested in extreme weather conditions including wind, fire, and snow.

# **FEATURES**

- · Fully integrated bonding
- Click-on Mid & End Clamps
- Compatible with a variety of EcoFasten roof attachments

# **DISCLAIMER**

This manual describes proper installation procedures and provides necessary standards required for product reliability. Warranty details are available on the website. All installers must thoroughly read this manual and have a clear understanding of the installation procedures prior to installation. Failure to follow these guidelines may result in property damage, bodily injury or even death.

#### IT IS THE INSTALLER'S RESPONSIBILITY TO:

- Ensure safe installation of all electrical aspects of the array. All electrical installation and procedures should be conducted by a licensed and bonded electrician or solar contractor. All work must comply with national, state and local installation procedures, product and safety standards.
- Comply with all applicable local or national building and fire codes, including any that may supersede this manual.
- Ensure all products are appropriate for the installation, environment, and array under the site's loading conditions.
- Use only EcoFasten parts or parts recommended by EcoFasten; substituting parts may void any applicable warranty.
- Review the Design Assistant and Certification Letters to confirm design specifications.
- Ensure provided information is accurate. Issues resulting from inaccurate information are the installer's responsibility.
- Ensure bare copper grounding wire does not contact aluminum and zinc-plated steel components, to prevent risk of galvanic corrosion.
- If loose components or loose fasteners are found during periodic inspection, re-tighten immediately. Any components showing signs of corrosion or damage that compromise safety shall be replaced immediately.
- Provide an appropriate method of direct-to-earth grounding according to the latest edition of the National Electrical
- Code, including NEC 250: Grounding and Bonding, and NEC 690: Solar Photovoltaic Systems.
- Disconnect AC power before servicing or removing modules, AC modules, microinverters and power optimizers.
- Review module and any 3rd party manufacturer's documentation for compatibility and compliance with warranty terms and conditions. Installers shall refer to the ClickFit System installation manual for complete installation instructions.
- ClickFit rails shall not be used as scaffolding, a roof jack, or any form of an anchoring point for roof personnel.
- Ensure that the roof is in good condition prior to installing any EcoFasten components.

Max Voltage = 600V, Max Imp = 13A, Max Isc = 19A	3.8 kW (1534000)	Powerwall 3 (1707000)

**IMPORTANT:** Refer to the applicable Tesla Inverter or Powerwall Installation Manual for specific instructions, including MCI-1 mounting, clearances, ratings, compatible connectors, and rapid shutdown initiation methods. MCI-1 installation configurations shown below are specific to the Ecofasten ClickFit UL 3741 Listing and supersede MCI-1 configurations shown in the Tesla installation manuals.

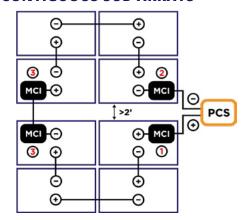

#### **View Tesla Installation Manual**

#### **CONTIGUOUS ARRAYS**

Where one or more PV strings are connected within a single contiguous array as shown in the figure, Tesla MCI-1s shall at a minimum be installed at both the positive and negative ends of each string between the last module and the homerun to the PCS. If there are multiple arrays each shall be equipped with MCI-1s as shown in the figure.

#### **NON-CONTIGUOUS SUB-ARRAYS**

Where any string is connected across non-contiguous sub-arrays separated by more than 2' (see example figure), MCI-1s shall be installed as follows:

- 1. At the positive end of the string between the last module and the PCS homerun.
- 2. At the negative end of the string between the last module and the PCS homerun.
- 3. At both ends of the connection between sub-arrays.

**Note:** Use the ClickFit MLPE Mount to mount the MCI-1 to the ClickFit Rail. See ClickFit Install Guide for additional instructions.

#### SID INSTALLATION INSTRUCTIONS

Where one or more PV strings are connected within a single contiguous array as shown in the figure, the positive and negative ends of each string shall be connected to the MNSSR. The leads of each MNSSR get connected to the PCS. If there are multiple arrays, then each array each shall be equipped with an MNSSR as shown in the figure.

**Note:** MNSSR products shall be mounted the module frame. Refer to the Midnite Solar installation manual for additional instructions.

### **INTRODUCTION:**

# **UNDERSTANDING UL 3741 AND NEC 690.12**

#### 2020/2023 NEC 690.12(B)(2) Controlling Conductors Within the Array Boundary

The ClickFit Photovoltaic Hazard Control System (PVHCS) is a UL 3741 Listed system that complies with NEC 690.12(B)(2), when installed by qualified persons per the installation procedures outlined in the ClickFit System Installation Manual and this Addendum. Please refer to the following pages of this addendum for various example cases of system designs that comply with 690.12(B)(2).

#### 2020/2023 NEC 690.12 Background

2020 NEC690.12 Rapid Shutdown of PV Systems on Buildings requires that all PV arrays installed on or in buildings shall include rapid shutdown functions to reduce shock hazard for Fire Fighters (FF) in accordance with 690.12(A) through (D):

#### (A) Controlled Conductors

- (1) PV system DC circuits
- (2) Inverter output circuits originating from inverters located within array boundary

#### (B) Controlled Limits

- (1) Outside Array Boundary: ≤30V within 30 seconds
- (2) Inside Array Boundary The PV System shall comply with one of the following:
  - (1) Listed PV Hazard Control System (UL 3741)
  - (2) ≤80V within 30 seconds after rapid shutdown initiation
  - (3) PV array without exposed wiring methods or conductive parts (NEC 2020 only)

#### (C) Initiation Devices

• Initiation device(s) shall initiate the rapid shutdown function of the PV system

#### (D) NEC 2020 - Equipment

Equipment that performs rapid shutdown functions other than initiation devices, such as listed disconnect switches, circuit breakers, or control switches.

#### (D) NEC 2023 - Building with Rapid Shutdown

Buildings with PV systems shall have a permanent label located at each service equipment location to which the PV systems are connected or at an approved readily visible location and shall indicate the location of rapid shutdown initiation devices.

- NEC 690.2 defines the array as a mechanically and electrically integrated grouping of modules with support structure, including any attached system components such as inverter (s) or dc-to-dc converter(s) and attached associated wiring.
- T NEC 690.12(B) defines the array boundary as 1ft from array in all directions. This indicates that the array boundary can extend 1 ft from the edge of the Clickfit racking or module.

### **INTRODUCTION:**

# **INSTALLATION METHODS PER UL 3741 AND NEC 690.12**

The following case studies are provided by EcoFasten to show examples of installation configurations that comply with NEC 690.12(B), however compliance is not limited to these examples.

Case 1: UL 3741 Listed System, Single Arrays, - Page 8

Case 2: UL 3741 Listed System, Contiguous Sub-Array - Page 9

Case 3: UL 3741 Listed System, Multiple Arrays - Page 10

The simplest installation method to comply with NEC690.12(B) is to utilize the Clickfit UL 3741 system with a single array (Case 1). Installations where sub-arrays can be included within a 1-ft array boundary, or 2-ft total, can be considered a contiguous array (Case 2). With multiple arrays, and more than a 2-ft gap between them, see Case 3.

All inverter and/or energy storage input circuits (DC) outside of the PV array boundary will require the use of String Isolation Devices (SID) to de-energize circuits leaving the array per 690.12(B)(1) after initiation (DC disconnect, AC breaker or AC disconnect).

Inverter and/or energy storage output circuits (AC) are outside of the array boundary and meet the 690.12(B)(1) requirement after initiation (AC breaker or AC disconnect).

Case studies and NEC guidance have not been verified by Intertek.

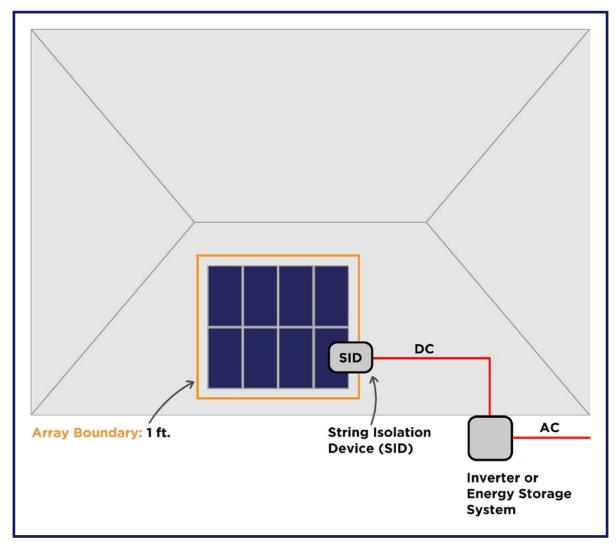

### **UL 3741 LISTED SYSTEM:**

# **CASE 1 SINGLE ARRAY**

Single arrays comply with NEC 690.12(B)(2)(1)

- Outside Array Boundary: ≤ 30V within 30 Seconds
- Inside Array Boundary: ≤ 600V Residential, 1000V Commercial

#### **Case 1: Maintaining NEC compliance for single arrays.**

Single arrays require the use of a SID as shown in the figure above to control the conductors outside of the array boundary.

**IMPORTANT:** Review electrical equipment page(s) for specific approved SID(s) and install methods.

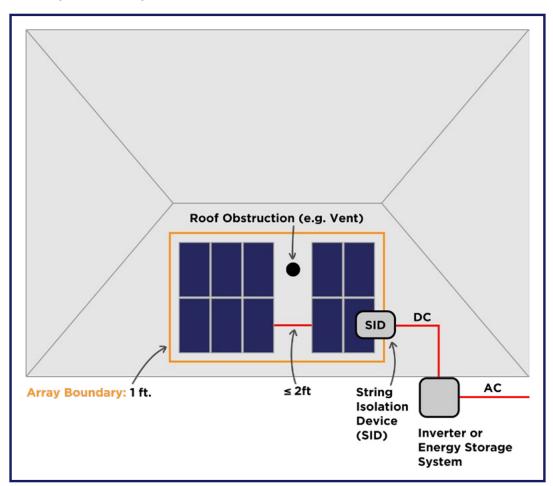

### **UL 3741 LISTED SYSTEM:**

# **CASE 2 CONTIGUOUS SUB-ARRAY**

Sub-array(s) within the same array boundary ( $\leq$  2ft) are considered contiguous and comply with NEC 690.12(B)(2)(1)

- Outside Array Boundary: ≤ 30V within 30 Seconds
- Inside Array Boundary: ≤ 600V Residential, 1000V Commercial

### Case 2: Maintaining NEC Compliance with sub-array(s) within array boundary.

Multiple arrays with maximum 2 ft. spacing between array and sub-array result in a contiguous single array boundary and will require the use of a SID as shown above to control conductors outside of the array boundary.

**IMPORTANT:** Review electrical equipment page(s) for specific approved SID(s) and install methods.

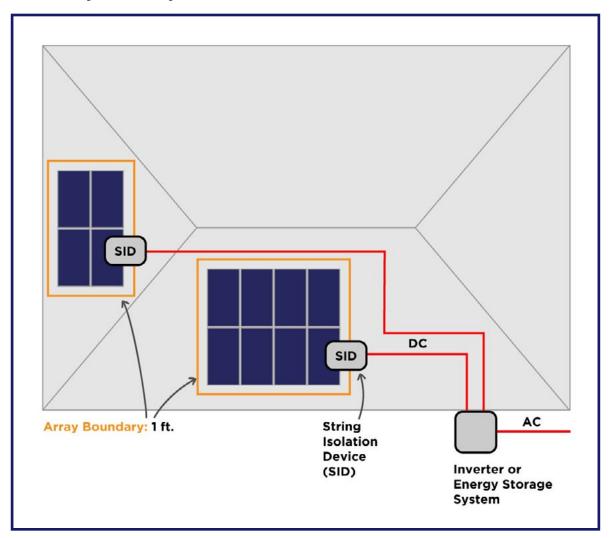

### **UL 3741 LISTED SYSTEM:**

# **CASE 3 MULTIPLE ARRAYS**

Multiple arrays with multiple strings comply with NEC 690.12(B)(2)(1)

- Outside Array Boundary: ≤ 30V within 30 Seconds
- Inside Array Boundary: ≤ 600V Residential, 1000V Commercial

### **Case 3: Maintaining NEC Compliance with multiple arrays.**

In multiple arrays with multiple strings, each string will require a SID. When a string is split across non-contiguous (>2ft) sub-arrays, a SID must be installed on both ends of the connection between sub-arrays as shown

**IMPORTANT:** Review electrical equipment page(s) for specific approved SID(s) and install methods.

### **UL 3741 LISTED SYSTEM:**

# **WIRE MANAGEMENT GUIDELINES**

The Clickfit wire management components noted in the list of approved PVHCS equipment on page 2 were evaluated and approved for providing wire positioning to prevent potential Fire Fighter (FF) interactions.

Proper wire management is critical for UL 3741 compliance and requires that all wires be routed in a manner that prevents exposure to potential FF interactions, such as routing wires under modules or through approved listed raceway for wires running between arrays.

When running PV wires parallel to the CF Rail, use the Clickfit Wire Management Clip as shown below. When running wire perpendicular to the rail, use the Clickfit Wire Management Clamp as shown below.

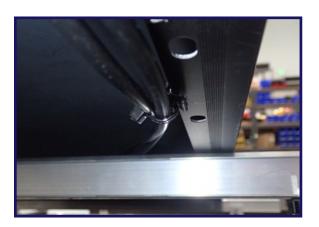

### **UL 3741 LISTED SYSTEM:**

# **WIRE MANAGEMENT GUIDELINES**

When running wires under a module, attach the Frame or Edge Clip to the module frame, and where needed, use the approved Cable ties to secure wires to the frame flange or mounting hole, as shown below. When needed, cut off any remaining cable tie after installation. All wires must remain underneath the module after installation. There shall be no visibly exposed wires after installation of modules.

Any wires running to subarrays or other components that cannot be covered by a module shall be installed in approved electrical raceways such as the Listed Conduit types shown on page 2.
